Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WPI; 2001-061546/07. P-PSDB; AAB50056 Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses.

Claim 1; Page 86-87; 106pp; English

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinase 1 (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal infection

The invention relates to an AMPK (AMP-activated protein kinase) related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein Kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK primates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as in other cell types such as heart and skeletal muscles, as well as increases GLUT-4 and glycosen in muscle. Activation of SNARK is predicted in chave insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipoprotein production leading to increased come type of disorders of lipoprotein production leading to increased administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as disbetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purposes. SNARK antagonists may be administered to increase fuel production, decrease glucose uptake and increase levels of blood glucose in a patient suffering from hypoglycaemia. The present sequence is rat SNARK CDNA suffering from hypoglycaemia. The present sequence is rat SNARK CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         228

```
An area designated 3700, and the polymucleotide sequence encoding it. The invention also describes the use of a modulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a substrate protein. Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylate an amino acid residue of a substrate protein. Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylation, cell signalling, tumourigenesis, mitogenesis, transcription of a gene, progression of atheroselerosis, and signalling across the blood-brain barrier. The polymucleotide and polypepide molecules for protein kinase 3700 may be used as diagnostic targets and therapeutic agents for curing pk-related disorders and cellular pholyficing, alleviating, or curing pk-related disorders and cellular pholyficing, alleviating, or differentiative disorders and cellular pholyficing, and significative and/or couring pk-related disorders and cellular pholyficing, missed 3700 to detect a genetic alteration in a 3700 gene, in chromosome mapping, for transcription, in forensic physical as surrogate markers. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  261

Rudolph-Owen LA; Chun M, Williamson MJ; Meyers RE, Galvin KM, ξ, F,

New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26175, 25643, 26638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, heart failure and angina.

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 21967, 11993, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, 14989, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, 14989, angles, 38555 or 539 andelec acid molecules and any one of 40 nuclectide sequences (I). The nucleic acid molecules and confidence, or a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorder, which is a subject a trisk of developing a disorders, brain disorders, platelet disorders, breast disorders, platelet disorders, breast disorders, platelet disorders, breast disorders, platelet disorders, conditional disorders, thyroid disorders, thyroid disorders, thyroid disorders, thyroid disorders, skeletal muscle disorders, conducted disorders, skeletal muscle disorders, conducted disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, disorders, neurological or central nervous system conducted disorders, neurological or central nervous system disorders, erythroid disorders, neurological or central nervous system disorders, erythroid disorders, neurological or central nervous system disorders, erythroid disorders, neurological or central nervous system disorders, polypeptides are also useful as modulating agents in regulating a variety of cellular process, e.g. cell proliferation, differentiation, growth and division. This sequence encodes a novel human protein of the invention. Note: The sequence given in the specification are also avaitable in central nervous conduction of the service of the services of the sequence of the services of the sequence of the services of the sequence of the services of the sequence of the services of the sequence of the services of the sequence of the services of ftp.seqdata.uspto.gov/sequence.html?DocID=20040058355

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent din not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    82 CTACTGCTGCCCGACCCACTCCACCTCGCGGTCCCCGCACCATGGAGTCGGTGGCCTTAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                 This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the Oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chachdahrdcccrocccccrrccrccrccrccrccarddahrdccrdcrdcrrrrrcg 136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          184

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                      2034
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  from human cDNA libraries which can be used for gene therapy or in vaccines. The polymucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence encodes a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel polynucleotides and polypeptides isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids having the sequences of clones isolated from libraries of different human tissues, useful in recombinant DNA methodologies.
                                                                                                                               CCCTAGGAATCTGCTCAAAGCTCAGCTGAGGAAAGGGAGATGGTGCCCTAGTATGGGGTAG

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information, crecived from orber cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, curropeptides and hormones) which are received and interpreted by diverse cell receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

nvention.

The present invention relates to a method (M1) for determining the subtype of leukaemia cells and whether a patient sample contains leukaemia cells. The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic solerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anoemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the

```
This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        v nucleic acid molecule encoding a kinase polypeptide, useful for
sparing a composition for treating diseases or disorders, e.g., cancer,
neurological, immunological or inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene; ds; kinase; human; SNP; single nucleotide polymorphism; tyrosine protein kinase; PTK; STK; gene therapy; cancer; immune-related disease; cardivoascular disease; brain; neuronal associated disease; metabolic; inflammatory disorder; cytostatic; neuroprotective; immunomodulator; antinflammatory calcium/calmodulin-dependent protein kinase; NuaK2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the argainine-rich protein-like polypeptides, such as mapping, identifization of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ1206) or their mature procein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The cocoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating celliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autonimume diseases (multiple sclerosis, clabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver or lung fibzonsis, infections (bacterial, viral, fungal, parastitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format contractly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ų,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              472
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         124

comprise human kinase polypeptides

Page 184; 197pp; English Claim 5;

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or conditions and provided in the disease of disease, adult respiratory distress syndrome, disease, attentosoclerosis, anaemia, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, diabetes mellitus, multiple sclerosis, gout, bronchitis, psoriasis, Reiter's syndrome, costeoarthritis, osteoparely syndrome, voitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protozoal and helminthic infections) growth and development disorders (arteriosclerosis, cirrhosis, hepatitis, cushing's syndrome, hypothyroidism, cerebral palsy, cataracts; cardio vascular disease, hypothyroidism, cerebral palsy, cataracts; cardio vascular disease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Pabry's disease, lung tumours); lipid disorder (fatty liver, Pabry's disease, lung tumours); lipid disorder (fatty liver, Pabry's disease, lung tumours); lipid disorder (fatty liver, Pabry's disease, chronic bronchitis, lung tumours); lipid disorder compound and in gene therapy. The present sequence is human by human. PKIN-12

```

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, CC 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, CC 21967, M1983, m1983, 33155, or 593 nucleic acid molecule (I) comprising any one of 40 nucleotide sequences (I). The nucleic acid molecules and polypeptides are useful for diagnosing and treating a subject having a disorder, which is associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, CC 37903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 activity, such as cellular proliferative and/or differentiative disorders, kidney (renal) disorders, breast cdisorders, colon disorders, kidney (renal) disorders, prostate disorders, thyroid disorders, spleen disorders, prostate disorders, thyroid disorders, seletal muscle disorders, cardiopoietic disorders, pancreatic disorders, seletal muscle disorders, skin (dermal) disorders, disorders, cardiovascular disorders, colon disorders, disorders, cardiovascular disorders, colon disorders, disorders, associated with bone metabolism, immune, e.g. inflammatory disorders, cardiovascular, viral disorders, metabolic disorders, blood vessel disorders or angiogenic cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardiovascular, cardio
